

FootSafe prevention boot

FootSafe prevention boots are indicated for the prevention of pressure ulcers in patients identified to be 'at risk' and as part of a package of care in the treatment of all categories of pressure ulcer.

The boot is manufactured in uncovered anti-microbial polyurethane and is available in 5 sizes with adjustable anterior lower leg fastening straps, ensuring patient comfort, assisting in minimising movement of the boot and allowing the accommodation of variable sized wound dressings.

Infection Control is of utmost importance to Prolevo and therefore all models are fully washable to hospital protocol standards. Boots are for non ambulatory use only.

FootSafe Inflatable core cell

is manufactured in anti-microbial impregnated polyurethane (PU). All seams and valves are HRF (high radio frequency welded) as opposed to heat welded for optimal strength.

FootSafe Innovative PU Button fastenings

Allows for an effective, comfortable adjustable strap fastening function without the risk of harbouring harmful bacteria within the design. (Design protected)

Description	Pair	Box (5 Pairs)	Box (25 Pairs)
Replacement Pump Only (Single)	PHPB-PO	-	-
FootSafe Prevention Boot, Uncovered, Pre-Inflated, Childs	PHPB-UC-PI-K-P	PHPB-UC-PI-K-P5	PHPB-UC-PI-K-P25
